CHROMEOS USERS

CVE 2022-3201
states that an
attacker who
convinces a user
to install a
malicious
extension may
bypass navigation
systems.

**This is a phishing
attempt! Never
install software
from an unknown
party.**

Cyber Hygiene

Today's Topic: **LAYERED DEFENSE**

Installing a Firewall at the entrance to your network will act as a barrier blocking unsolicited traffic, and regulate incoming and outgoing traffic with security controls (rules). Granular configuration of the firewall is highly recommended or else it may not work efficiently.

Do you have Anti-Virus?

Having Anti-Virus & Anti-Malware installed on each computer that you use will significantly increase the security of your network. In addition to the firewall filters, Anti-Virus software scans, protects, and scrubs data on a local level just in case a firewall is bypassed you are still protected. It is also recommended to use more than one Anti-Virus program. This is because no Anti-Virus is perfect and with multiple malware software, if one misses, the other should catch the malicious activity.

Always remember, if your system isn't acting normal say something right away, before it is too late.
